In Focus

Holistic formwork for a landmark mixed-use project

IKEA NMP, Noida

Dear Reader,

20 years of PERI India marks a significant milestone in our journey of building lasting partnerships, delivering innovative solutions, and contributing to the nation's infrastructure growth. We are delighted to present the 2027 edition of PERI Scope, celebrating two decades of innovation, growth, and trusted partnerships. Since our foundation in 1969, we have been a family-run company and a pioneer in formwork and scaffolding technology. For us, partnership and trusting cooperation with our customers is our top priority. Thanks to our many years of international experience, we pool valuable knowledge for the development of innovative products and services. PERI brand has stood for cutting-edge technology, innovative strength and close customer proximity. With entrepreneurial thinking, reliability and our passion for our customers, we have become one of the leading manufacturers and suppliers of formwork and scaffolding systems.

With the government's strong focus on infrastructure and the pace of urbanization accelerating, India is set to witness a surge in modern infrastructure projects and high-rise buildings. Construction practices are becoming more streamlined, with a growing emphasis on timely project completion. Modern

construction now requires technologies that are not only faster and safer but also more innovative.

Our innovative product launches, extensive geographic presence, and fast service delivery have consistently exceeded customer expectations with every opportunity to serve.

We are expanding our offices in key cities like Mumbai, Delhi, Chennai, Bengaluru, Kolkata, Hyderabad, Pune and Ahmedabad, and have resident engineers in other metro and tier II cities. Our robust logistics network across India offers us greater flexibility in managing customer projects efficiently. Our success across various segments and regions would not have been possible without your support. What drives our success is our unwavering commitment to prioritizing the needs and benefits of our customers in everything we do. A partnership built on trust is a core value of our company, and it remains the foundation of our customer relationships. I would like to once again extend my sincere gratitude to all our esteemed stakeholders for your continued support. We remain committed to ensuring that PERI will always be your trusted partner for all your formwork, scaffolding, and engineering solutions needs.

A handwritten signature in black ink, appearing to read 'Anibrata Routh'.

Sincerely,
Anibrata Routh

Holistic formwork for a landmark mixed-use project

IKEA NMP, Noida

Noida Meeting Place (NMP), Noida is envisioned as a landmark destination that brings people together, creating spaces that truly connect with local communities.

Noida Meeting Place is a large mixed-use project near the Sector 51–52 metro interchange in Noida. The site, located behind the Blue Line (Sector 52) and Aqua Line (Sector 51), will feature a fully integrated IKEA store, retail and dining zones, co-working spaces, and a hotel.

The project consists of two towers with a total site area of 42,000 sqm. It includes 35+ floors above ground and 3 basement levels.

The floor-to-floor height in the basement is 6.9 m, while the upper floors have around 5.2 m.

PERI provided solution for the project using the RCS core climbing system, HANDSET Alpha wall formwork system, SKYDECK slab formwork system and MULTIFLEX slab formwork system with PERI UP MI for shoring. Additionally, site supervision and design support was provided all throughout the project duration.

Mr. Ananyo Maitra
Project Director, Cemindia Projects Ltd.

"We took a comprehensive formwork solution from PERI for this project. We required a formwork partner that could support us on site as well as with the systems. From planning to execution, they worked closely with our team to resolve any challenges quickly. The basement works had different construction requirements, and PERI helped us choose the right solution for each stage."

PERI UP FLEX for Industrial Plant

Coca-Cola Plant, Sanand

The soft drink giant, with a legacy spanning over a century, is one of the leading players in the beverage sector in India. Known for its widespread brand recognition, the company holds a significant market share in the country.

Mr. Sagar Patel, Director, PSP Projects Ltd.

The customer was looking for a solution for four key structures in the project. PERI provided solution for the complete project using PERI UP Flex scaffolding system.

Our PERI UP FLEX system was used for slabs, beam bottoms, columns, walls, and finishing works. Its modular design, ease of assembly, and adaptability ensured a safe and efficient execution while allowing for flexibility to meet changing site demands PERI solution.

"PERI UP scaffolding played a key role in streamlining our site operations through its versatile configuration and quick installation process. The system significantly supported faster project progress while enhancing workforce efficiency on site. Throughout the project, PERI consistently extended strong engineering and technical assistance, right from design coordination to successful execution in line with client requirements. The robust and user-friendly scaffold arrangement also made access to complex work zones much easier for the workforce."

Exhaustive solution for data center

Data center, Navi Mumbai

Kedar Joshi
Executive Director, Suroj Buildcon

This data center is located in Airoli, Navi Mumbai consisting a 300MW campus at full capacity, making it one of the largest facilities in Asia.

"We were very satisfied with the quality of the material and the overall finish delivered for the project. The design team was extremely supportive and cooperative throughout the process. We had initially planned for a 42-day cycle period, but with their support and coordination, we were able to complete it in 35 days and meet our timeline successfully."

The customer was looking for a safe and efficient climbing solution capable of handling high vertical concrete pours while maintaining fast construction progress. The RCS climbing system enabled smooth and reliable climbing operations for the periphery concrete wall throughout all construction stages.

The building consists of 7 floors with a floor-to-floor height of 7 m. Along with core climbing, we provided a solution with PERI UP Flex & PERI Shore for the slabs. By using the PERI shoring formwork, the project team achieved improved cycle times, optimized labor efficiency, and consistent construction quality.

Modular slab formwork system for IT commercial complex

Prestige Tech Zone, Bengaluru

Prestige Tech Zone is an upcoming commercial development by Prestige Office Ventures, strategically located in Kundalahalli, Bengaluru. Spread across 18.56 acres, the project is part of the city's prominent IT corridor and is well-connected to key business districts and arterial roads.

The slab formwork solution accommodates varying floor-to-floor heights. The client was looking for a comprehensive system that ensures high-quality concrete finish and faster cycle times. Earlier, conventional methods were used; however, with the adoption of PERI's formwork solutions and services, the client is satisfied with the improved finish, faster progress, and overall support provided.

PERI provided complete formwork solution for the project including slab, beam and column capital. PERI ALPHADECK slab formwork system was used for slabs of 250 mm thickness with a floor-to-floor height of 5 m. For beam and column capital, MULTIFLEX system was used. ALPHADECK being a lightweight formwork helped in achieving better labor efficiency at site with excellent concrete finish.

"We chose PERI ALPHADECK for this project as it met our requirements for speed, safety, and ease of handling. The lightweight, modular system made it easier for our team to work efficiently on site. Its high repetition capability, quality concrete finish, and faster construction cycle added significant value to the project."

Noorul Ameen, CEO, K2K Infrastructure Pvt. Ltd.

Monolithic solution for

Harbour Breeze, Mumbai

Harbour Breeze is a multi-story residential building in Mazgaon, Mumbai.

The client required a solution that would streamline the construction process, enhance site safety, and support the efficient completion of all project activities.

PERI provided a complete monolithic solution using the MONOCAST monolithic formwork system, enabling the simultaneous casting of walls and slabs. The floor-to-floor height in the project was 3.2 m. The lightweight aluminium components also allowed for faster handling and assembly, while maintaining high-quality concrete finishes and consistent construction standards throughout the project.

Developer Chheda group
Contractor Mahan Buildcon

Nirma Corporate house, Ahmedabad

The Nirma Corporate House is a prestigious commercial development designed to serve as the corporate headquarters of Nirma Ltd. The project's complexity lies not only in its scale but also in its changing geometry, making it an engineering precision.

To address the project's structural and architectural requirements, PERI has provided a solution combining the MONOCAST monolithic formwork system for the core walls and the SKYDECK slab formwork system for the surrounding slab areas. This integrated approach leverages the strengths of both systems, enabling efficient construction cycles while maintaining high standards of quality, safety, and productivity.

The buildings consists of 25+ floors, and the floor-to-floor height is 4.4 m and goes up to 6 m. Through our formwork expertise and on-site support, PERI helps the project team achieve faster construction cycles, enhanced productivity, and safe execution.

"Our long-standing experience with PERI has been marked by reliability, efficiency, and strong support. For this project, we used the MONOCAST Monolithic Formwork System and SKYDECK system. They have provided the flexibility and efficiency required to execute the project smoothly. Their engineering support and ability to adapt the formwork and safety systems to our evolving requirements have been valuable in helping us maintain productivity and construction quality."

Mr. Johil Chavda, Director, Chavda Infra Ltd.

residential complex

Shilp Celestial, Ahmedabad

Shilp Celestial is a premium residential project by Shilp Group, located on SG Road near Vaishnodevi in the Ahmedabad–Gandhinagar region.

The customer was looking for a solution that would accelerate the construction process, improve worker safety, and ensure the smooth execution of each component of the project. This project consists of 5 towers. PERI provided a complete solution for walls and slabs with MONOCAST monolithic formwork system. The floor-to-floor height is 3.2 m.

Contractor
Spartan Builders Pvt. Ltd.

MONOCAST Monolithic Formwork

One system, one pour, pure precision – shaping tomorrow, today.

Fully extruded panels

Maximum use of standard panels

Innovative flat tie solution

With MONOCAST, construction is entering a new era. Designed for visionaries, our innovative aluminium formwork system empowers you to realise bold ideas – all with one system in a single pour. With its remarkable durability, speed, and precision, MONOCAST sets a new benchmark for the industry.

Comprehensive solution for VCV Tower

Polycab VCV Tower, Vadodara

Polycab wires & cables new Vertical Continuous Vulcanizing (VCV) Tower, a structure reaching 150+ m is under construction in Vadodara, Gujarat.

PERI provided the complete solution with RCS core climbing system, ACS placer boom, BR shafts for lifts, SCS crane climbing system, for the non-typical walls, VARIO wall formwork system & HANDSET Alpha wall formwork system.

Contractor Shapoorji Pallonji Group

RCS Rail Climbing System

The universal climbing construction kit for safe working at great heights

PERI RCS (Rail Climbing System) combines the advantages of different climbing systems to create one single construction kit. The rail climbing system can be used as climbing formwork as well as a climbing protection panel and can easily be adapted to meet specific site requirements.

Safe rail-guided procedure

The moving unit is connected to the building at all times by means of climbing shoes.

Flexible mounting

The climbing shoe can be attached to walls as well as slab edges.

Variable assembly

Due to the 125 mm hole arrangement of the climbing rails, the platforms can be optimally adapted to suit the respective storey heights.

KEI VCV Tower, Sanand

KEI Industries' new Vertical Continuous Vulcanizing (VCV) Tower, a structure reaching 158+ m is under construction in Sanand, Gujarat.

The construction of the tower presented unique challenges so it was imperative to adopt an efficient method that could streamline the construction process without compromising safety and quality. PERI provided complete solution using VARIO wall formwork system, RCS hydraulic climbing system, HANDSET Alpha wall formwork system and ACS with Placer boom.

This innovative approach enabled us to maintain the project timeline while achieving impressive cycle times. In addition to providing high-quality equipment, we offered extensive support that included detailed engineering expertise & site supervision.

"PERI has been our formwork partner for years, delivering consistent performance across multiple projects. For this 158 m + VCV tower, Peri's RCS core climbing formwork system ensured cycle-time compliance and seamless co-ordination across levels. The system's adaptability reduced downtime and enhanced safety + productivity on site. We value and appreciate PERI's responsive technical team expertise, timely service, continuous and dependable service support throughout provided by PERI team."

Mr. Nilesh Bhagat
Vice President- Operations, Suroj Buildcon Pvt Ltd

Contractor Larsen & Toubro Limited, Construction

Core climbing for commercial building

Brigade Gateway, Hyderabad

Located in Hyderabad's fast-growing Kokapet area Brigade Gateway is a landmark mixed-use development by Brigade Group. Designed as an integrated township, it brings together premium residences, retail, hospitality, and commercial spaces in one destination.

The customer was looking for a solution that could accelerate the construction process, enhance worker safety, and ensure efficient and seamless execution of the project's core structures.

PERI has provided a solution incorporating the RCS core climbing system, ACS with Placer Boom and the VARIO wall formwork system for the project. The building has a floor-to-floor height of 4.05 m and consists of a total of 50+ floors.

RCS (Rail climbing system) provided safe, enclosed working platforms that reduced crane dependency and enabled faster, more efficient climbing cycles. The solution helped improve productivity, shorten construction cycles, and maintain consistent quality throughout the project.

PERI UP Flex for concerts

Concerts, PAN India

The customer was looking for a safe, flexible, and efficient staging solution for concerts and live entertainment events. We delivered the required setup using the PERI UP Flex System for stages and sound system support structures for various international and local artists.

The PERI UP Flex System features a modular design that enhances safety, reduces installation time, and enables efficient handling of complex event layouts, making it an ideal solution for concert stages and sound support structures. Its high load-bearing capacity and adaptable configuration allowed seamless integration with diverse stage and audio setups. The system ensured quick assembly and dismantling, minimizing event turnaround time while maintaining the highest safety standards.

Contractor
Show Genesis India Pvt Ltd

PERI SHORE for one of India's largest **GREEN** energy project

Reliance Green Energy Giga Complex, Jamnagar

The Dhirubhai Ambani Green Energy Giga Complex, also known as the Jamnagar Green Energy Giga Complex, is a large-scale project being developed by Reliance Industries in Jamnagar, Gujarat, India.

PERI provided a solution for Polysilicon plant, Glass factory, and CVD reactor with PERI Shore, VARIO wall formwork, PERI UP Flex staircase, SCS Crane climbing system and HANDSET Alpha wall formwork system. Since safety was a huge priority on this site, so PERI UP FLEX was a perfect fit for the project.

This project was challenging because we needed to move and adjust the system to different buildings according to the construction schedule. PERI worked as a scaffolding partner for the project and worked together with consultant, contractor & client.

Our team regularly conducted training sessions on our systems. These sessions instructed site workers on proper setup and usage, with a strong focus on safety and efficiency.

Customer Reliance Industries Ltd

PERI Shore

The efficient shoring tower with high leg loads and system-integrated safety

The PERI Shore is a heavy-duty shoring system with a wide range of applications in bridge-building, high rise and industrial construction. It is a modular and flexible system with gravity lock technology which allows easy and safe assembly.

Thanks to its modular design, the PERI Shore is flexibly adaptable to any building geometry and wide range of applications.

Thorough formwork solution for residential building

Adani Airica, Mumbai

Adani Airica is a newly launched residential project in Kanjurmarg, Mumbai.

The project consists of 30+ floors, and a floor-to-floor height of 4.2 m. We provided a complete solution for walls, columns, slabs & beams. We supplied HANDSET Alpha wall formwork system, Alphadeck and Tableform with PERI Shore for slabs & beams.

The selected systems ensured faster construction cycles, improved site safety, and enhanced concrete finish quality. Their modular and efficient design helped optimize labor productivity while maintaining flexibility for varying structural requirements across the project.

Contractor
BFS Engineering

VARIO for fair finish commercial project

Emerald Project, Indore

The Emerald Project in Indore is a commercial development comprising 12+ storeys, designed with a floor-to-floor height of 3.3 meters and a fair-face concrete finish requirement.

VARIO wall formwork system is a proven girder wall formwork system complete with the continuously adjustable elongated hole couplings.

To meet these project demands, PERI provided the non-modular VARIO wall formwork system. Being a non-modular system, VARIO offers high flexibility to adapt to complex and varying geometries, while also delivering excellent surface finish and efficient construction cycles.

Contractor Kalsi Brothers

Complete solution for a **GREEN** building project

ONGC Green Building, Kolkata

ONGC laid foundation of a green office building for MBA Basin at AA II, New Town, Kolkata. The project consists of 15+ floors. The client required a comprehensive solution for both slabs, walls and lift core.

PERI provided complete formwork solution tailored specifically for the project. We utilized the MULTIFLEX and PERI Shore for the slabs and beams, accommodating typical floor-to-floor height of 4.2 m. For columns, we employed the HANDSET Alpha wall formwork system, which is known for its versatility and ease of use.

The MULTIFLEX and PERI Shore provided a safe and reliable solution for varying slab heights, including shoring heights of up to 16 m and 42 m, while ensuring stability and efficient load transfer throughout construction.

"We used the PERI formwork and shoring systems for our project, and the overall experience was very positive. The systems were easy to assemble, provided the required stability for varying shoring heights, and helped us maintain our construction schedule. PERI's technical support team was responsive throughout the execution."

Mr. Rajesh Dhar
Project Director, Pabscon

Modular wall formwork system for residential project

Godrej Aristocrat, Gurgaon

Godrej Aristocrat is a recently launched residential project in Sector 49, Gurugram.

PERI provided a solution with HANDSET Alpha wall and column formwork system for raft, footing and columns. The floor-to-floor height in the project was 2.4 m.

The system has a robust steel frame design which helped in delivering good concrete surface finishes while ensuring safety, flexibility, and reliable performance across diverse project requirements. The panels are lightweight and easy to handle reducing installation time and increasing overall site productivity.

Contractor KEC International Ltd

Slab formwork for educational institution

Anant National University, Ahmedabad

Anant National University is a private university located in Ahmedabad, Gujarat, India.

PERI provided solution with HANDSET Alpha wall formwork system and MULTIFLEX girder slab formwork system for the project.

The customer was looking for an easy to handle and ergonomic system in all aspects. The customer was offered training support and site supervision in addition to the system solution.

Contractor
N.J. Devani Builders Pvt Ltd

ALPHADECK for a commercial building

Gopalan Fortune City, Bengaluru

Gopalan Fortune City is a contemporary tech park featuring premium office spaces tailored to the dynamic requirements of modern businesses. With its strategic location and seamless connectivity, the development offers a well-equipped professional workspace complemented by strong infrastructure and key business amenities.

PERI provided a complete solution with ALPHADECK slab formwork system, HANDSET Alpha wall formwork system and Tableform for the project. The floor-to-floor height in the project was 4 m.

The large panels allow you to cover large areas efficiently with a minimum of formwork material. The system solution requires hardly any additional parts.

Contractor Gopalan Enterprises

Crane-free panel formwork for industrial building

Avaada Venture, Nagpur

The Avaada group is setting up a 3GW of cell+module manufacturing capacity in Butibori near Nagpur in Maharashtra.

PERI provided a solution with HANDSET Alpha wall and column formwork system for the project. The floor-to-floor height in the projects is 3 m. Our system eliminated the usage of huge quantity of staging at site. The system is crane-independent and features modular panels suitable for all kinds of walls and columns.

Contractor
Jepee Construction Pvt Ltd

Contractor V5 Infrabuild LLP

Holistic solution for residential building

The Lumos, Ahmedabad

The Lumos is a residential project located in Ahmedabad.

PERI provided a complete solution with SKYDECK slab formwork system with Multiflex for slabs and beams. We also provided HANDSET Alpha wall formwork system for columns. The floor-to-floor height is 3.4 m.

Along with supplying high-quality equipment, we also provided full support, including engineering and site supervision.

HANDSET Alpha Lightweight panel formwork system

HANDSET Alpha is a modular panel formwork system suited for various wall and column applications. It is designed in such a way that all panels are multi-purpose panels that can be used in any direction.

Fast working operations

Ideal sizes of multi-panels, very few components and multi-applications

Easy and simple connections

Unique alignment coupler or wedge clip for all panel connections and in-built brace connector for connecting the push-pull props

Cost-effectiveness

Optimum panel sizes to ensure effective utilization and better productivity.

Ergonomic in all aspects

Lightweight panels with integrated handles, crane-free working at site

PERI UP Flex Shoring tables for data center

Data center, Chennai

Data Centre in Chennai is being developed on a 4-acre site in Ambattur, Chennai.

The location is strategically positioned near cable landing stations and benefits from reliable power supply along with well-established infrastructure. The facility will have a total power capacity of 54 MW, catering to global technology companies, cloud service providers, and large domestic enterprises.

PERI provided solution with PERI UP Flex scaffolding & shoring system. The slab height cast using the system was 7.25 m. PERI UP Flex is a versatile, modular scaffolding system designed for complex geometries and high load-bearing requirements.

Every challenge on site was effectively resolved with the help of the engineering and site supervision teams. PERI solutions also ensure ease of handling and support timely project completion.

Contractor URC Construction Pvt Ltd

HANDSET Alpha for Sewage Treatment Plant

STP, Mathura

PERI provided the solution with the HANDSET Alpha wall formwork system for the 60 MLD Sewage Treatment Plant in Mathura.

The customer was looking for an easy-to-handle and ergonomic system in all aspects. In addition to the system solution, the customer was provided with comprehensive training and on-site supervision to ensure smooth execution.

Contractor Enviro Infra Engineers Ltd

RCS Climbing System for safe working at heights

Port 133, Pune

Mr. Saurabh Jangle
Director, SJ Contracts Pvt Ltd

“The system provided a safe, efficient, and reliable climbing solution tailored to the project requirements. PERI’s technical support and on-site engineering assistance played a key role in improving productivity and ensuring smooth execution of the core structure.”

Port 133 is a luxurious commercial IT park located in Magarpatta, Pune. It consists of 5 towers. This complex also consists of a 5-star hotel.

For Port 133, we have supplied HANDSET Alpha wall formwork system and RCS core climbing system with VARIO for the project.

Technopolymer formwork system for bullet train station

BKC bullet train station, Mumbai

DUO

Wall + slab = one system

Lightweight universal formwork for walls, slabs, Columns and foundations

The material is very light compared to steel or wood. This allows for faster, more ergonomic work processes and saves on crane time requirements. Versatility is the key advantage of DUO universal formwork. On a consistent basis, the DUO concept reduces the number of different system components that are required, allowing you to apply the concept universally to your project.

This concept also supports the principle of sustainability: The energy requirements of your logistical processes will fall on account of reduced transportation and considerably lower transport weights.

Bandra Kurla Complex high-speed railway station, shortened to Mumbai BKC station, is an under construction high-speed railway station on the Mumbai–Ahmedabad high-speed rail corridor.

The customer was looking for a lightweight system for retaining walls. PERI provided solution with DUO formwork system for columns, shear walls, and retaining walls to ensure efficient execution and high concrete finish quality. Columns with a height of 5.4 m and shear walls with a height of 4.35 m, wall thickness of 2200 mm, and a wall length of 25 m in a single pour, were planned to enable smooth concreting operations while maintaining stability, alignment, and productivity on site.

Contractor Megha Engineering & Infrastructure Ltd

RCS P edge protection for a high rise building

Hiranandani westgate, Mumbai

Hiranandani Group Westgate is a landmark high-rise residential project within the expansive Hiranandani Estate township in Thane West. Strategically located on Ghodbunder Road, the development offers premium residences designed to deliver a modern and comfortable living experience.

The customer was looking for hydraulic self climbing edge protection system for the entire project. PERI provided solution with RCS P edge protection system. Our systems provided safety and helped to increase the speed of construction.

Contractor

Talib & Shamsi Constructions Pvt Ltd

HANDSET Alpha for a residential building

DLF, The Dahlias, Noida

DLF's, The Dahlias is an ultra-luxury residential development located on Golf Course Road in Sector 54, Gurugram.

PERI provided the solution using the HANDSET Alpha wall and column formwork system for the project. With a floor-to-floor height of 4 m for typical floors and 5.1 m for basement floors. The project has 5 basement levels along with 35+ typical floors. The system supported smooth and efficient execution of the project with flexibility, ease of handling, and faster assembly on site. PERI also provided continuous technical support and on-site supervision to ensure smooth installation.
